FREQUENCY:	50 to 60Hz	50 to 60Hz
LAMP:	E27 ; 60W max.	E27 ; 60W max.

Located in New York, USA, the Lincoln square is famous for the performing arts that take place in a group of eclectic buildings that seem to create a dialogue with the centerpiece of this square, the Revson fountain, where people gather before attending the cultural events.

"I remember spending the late afternoon at the Lincoln Square just admiring people and the rich artistic environment, when one element stood out. A group of arches in the main facade of the front building sets up the monumental scale of the entire square."

Joana Santos Barbosa

Designed by the American Architect Wallace K. Harrison in the 60's, the Metropolitan Opera House is clad in white travertine with full height structural arches that shape glazed recessed planes on the facade.

At night, the light coming from inside the building illuminates the entire square. This symbiosis between the structural grandeur and the intense interior light was the great source of inspiration for the design of the Metropolitan table lamp.
